By removing any channels from the xm radio you have taken one more step of seperating truckers from the rest of the world. This is in most some cases there only way to get continuous and in most cases very important information on whats going on around them, without having to find a new channel every few minutes by leaving that area, (and we know how safe changing radio channel can be while driving down the road.) They need good weather reports of where they are and where they are going at all times and this needs to be available at all times. Please take my comments and the 1000 more you probably will get in careful consideration, after all they pay thier taxes and are just tring to make a living the best way they know how and they are picked on enough!!!!!!!!!!!!!!!!!!!! GOD BLESS OUR TRUCKERS
